

Basic Equipment Setup for Volleyball Webcasting

Needs

- Connection to internet
- MacBook Laptop
- Video Streaming Software (Production Truck, Wirecast, etc.)
- Streaming platform (Blueframe, YouTube, etc.)

Audio

- Audio Mixer (Varying cost levels, Behringer Xenyx 802 or equivalent)
- USB/audio interface (Behringer U-Phono UFO202 or equivalent)
- RCA Audio cable
- Announcer headsets or mics (if announcers are being used)

Video

- HD Video Camera (Varying cost levels from Sony HDRC to Canon XA25 or equivalent)
- SDI and/or HDMI Video interface (Blackmagic UltraStudio Mini Recorder or equivalent)
- SDI or HDMI video cable

If desired, you could have play-by-play/announcers utilizing the audio mixer into streaming software, or simply take PA announcer audio into audio mixer.

Set up camera center court, top of bleachers for best visual coverage. You could run multiple cameras, but for basic streaming, one camera would be fine.

Feel free to contact Heath Shanahan with any questions.
